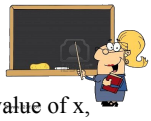
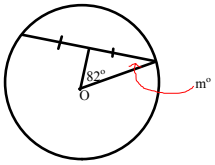
Warm Up
April 29, 2015

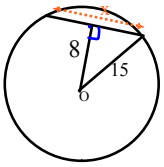


Determine the value of m, when O is the centre



$m = 180 - 82 - 90$
$= 8°$

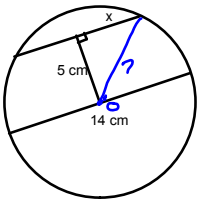
Determine the value of x, when O is the centre



$a^2 = c^2 - b^2$
$= 15^2 - 8^2$
$= 225 - 64$
$= 161$
$a = \sqrt{161}$
$= 12.7$

$x = 2(12.7)$
$= 25.4$

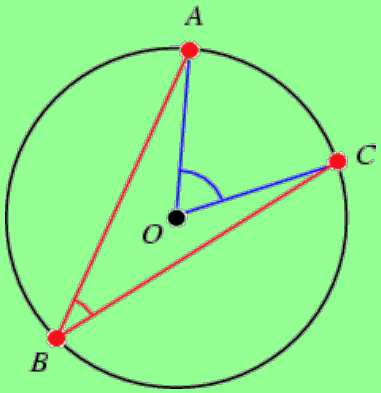
Find x



Short Side
$a^2 = c^2 - b^2$

Long side
$c^2 = a^2 + b^2$

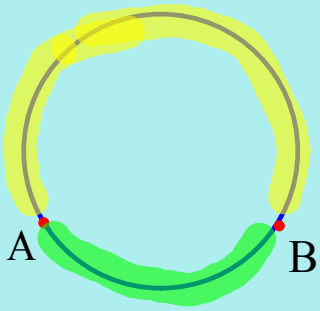
$a^2 = c^2 - b^2$
$x^2 = 7^2 - 5^2$
$= 49 - 25$
$= 24$
$x = \sqrt{24}$
$= 4.9\text{cm}$



Section 8.3

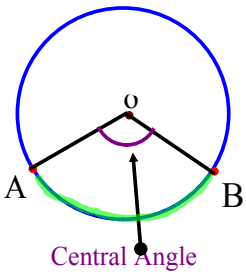
Properties of Angles in Circles

- The longer arc AB is the major arc .
- The shorter arc AB is the minor arc.



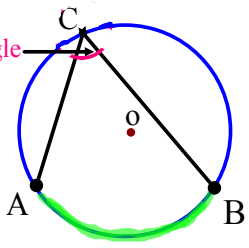
Central Angle:

The angle formed by joinging the endpoints of a arc to the centre of a circle (involves radii)



Inscribed Angle:

The angle formed by joinging the endpoints of a arc to a point on the circle

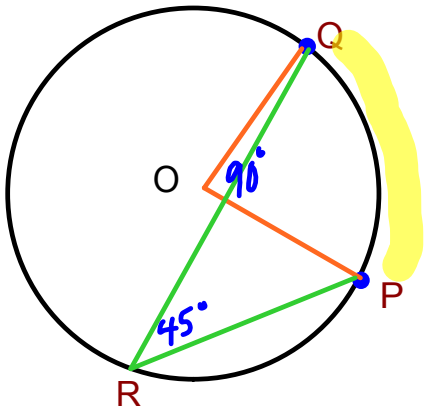


Inscribed and central angles are SUBTENDED by the MINOR arc

come from the same 'smaller arc'

Central Angle & Inscribed Angle Property

In a circle, the measure of a central angle subtended by an arc is TWICE the measure of an inscribe angle subtended by the same arc.



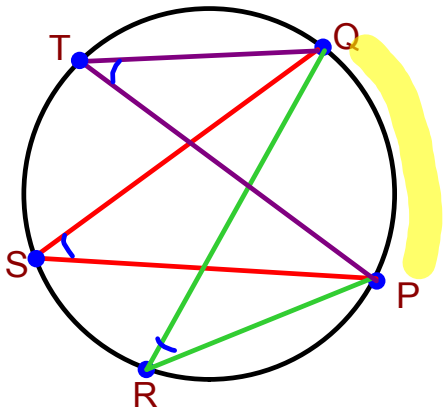
$\angle POQ = 2\angle PRQ$ Central angle is twice the inscribed angle

or

$\angle PRQ = \frac{1}{2}\angle POQ$ Inscribed angle is half the center angle

Inscribed Angle Property

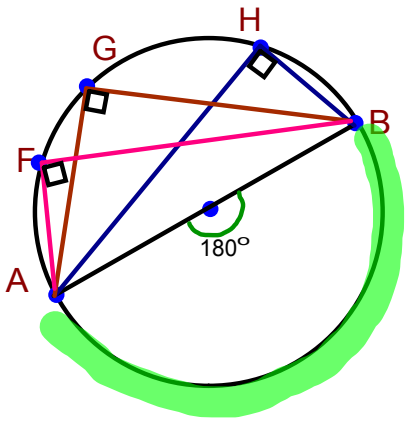
In a circle, all inscribed angles subtended by the same arc are congruent.



$\angle PTQ = \angle PSQ = \angle PRQ$

Angles is a Semicircle Property

All inscribed angles subtended by a semicircle are right angles



Makes sense

Inscribed angles are always half the centre

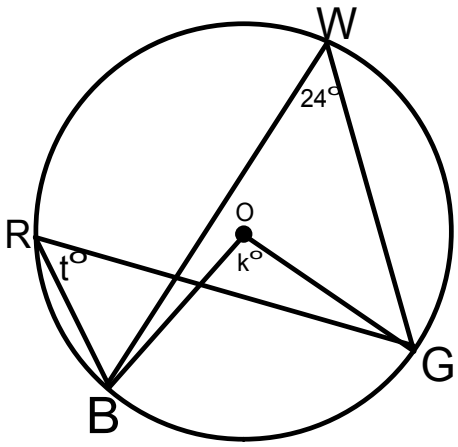
Center Angle = 180° (Straight Line)

Inscribed angle is half the Central Angle

Inscribed = (1/2) central
=(1/2) 180°
= 90°

Example 1
Using Inscribe and Central Angles

Point O is the center of a circle.
Determine the values of k° and t°.

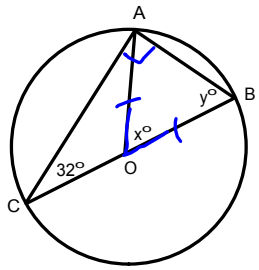


k = 48°

t = 24°

Example 2

Applying the Property of an Angle Inscribed in a Semicircle



Point O is the center of the circle.
Determine the value of x^o and y^o.

For Y°

$y = 180 - 32 - 90$
$= 58°$

OR

$y = \frac{180 - 64}{2}$
$= 58°$

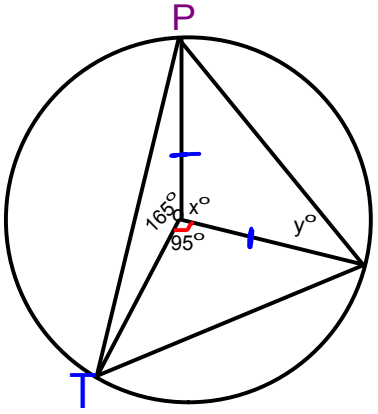
For X°

$x = 64°$

Example 3

Determining Angles in an Inscribed Triangle

Determining the values of x^o and y^o.



Hint: LOOK AT CENTER ANGLES and Complete the circle for x

$x = 360 - 165 - 95$
$= 100°$

$y = \frac{180 - 100}{2}$
$= 40°$

Homework:

p. 410 - 412
